DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art of the record fails to teach an unipolar transversal flux motor, comprising a rotor which is non-rotatably supported on a rotor shaft and is comprised of two coaxial ferromagnetic rotor rings which on their outer circumference remote from the rotor shaft are provided with constant tooth spacing, and having a permanent magnet ring which is magnetized in an axially and is clamped axially between the rotor rings and a stator which is concentric to the rotor shaft and has U shaped stator yokes with two yoke legs that are connected to each other by a crosspiece, which stator yokes are fixed to a housing with a spacing that corresponds to the tooth spacing, and are disposed so that the one yoke leg is disposed opposite the one rotor ring and the other yoke leg is disposed opposite the other rotor ring, each with a radial gap distance, yoke elements, are disposed between stator yokes arranged one after the other in the rotation direction of the rotor extends axially over the two rotor rings , and is disposed opposite them with a radial gap distance, and a stator winding, the stator winding having two coils, each with two coil sides , whose one coil side extends coaxial to the rotor shaft respectively over a group of stator yokes and yoke elements arranged in succession in the circumference direction, along the side of the yoke elements remote from the rotor shaft , between the yoke legs , and wherein the group spanned by the coil side of the one coil is

disposed spatially offset on the stator circumference and electrically offset by 90 degree in relation to the group spanned by the coil side of the other coil.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
